

Hamilton Air Force Base Wetland Project

**Decanting Contaminated Exhaust Water into San Francisco Bay
Federal Wildlife Refuge, whales are dying.**

**Bay Conservation and Development (BCDC)
Hello Brenda,**

Just wanted to thank you for calling me to discuss the Hamilton Air Force Base Restoration Project. I appreciate the time you spent with me on the phone. I want to congratulate you, on your success in getting closure on the site.

As you may know, I am interested in the results of the soil testing that identifies contaminants harmful to humans and animal life that were present on the Hamilton site. Location: <http://www.panoramio.com/map/#lt=38.052222&ln=-122.491788&z=-3&k=1&a=1&tab=1&pl=all>

I am requesting that soil testing be performed to identify the scope of the pollution plume from the current impact of the Hamilton Airbase Ammunition Dump at the Wetland Restoration Project area. This would be pertinent information for a baseline of contaminants as it pertains to the current impact of the pollution that has entered the bay from: a. run-off b. from leaching c. from the permeable water table d. from the current results of static pressure from the initial flooding of the site, and d. from the tidal flow impact into the water table.

If it hasn't already been done, I am requesting that testing be performed to establish the baseline on parts per million of Heavy Metals, PCB's and other Toxins that have already entered the bay soils adjacent to the Hamilton Fields Project to establish a baseline for true and correct environmental impact reporting. BCDC should request a contract for an annual report post full-scale flooding to monitor the results.

In the interest of public safety, I am requesting that a clear set of data be performed by your agency to protect the public and to monitor the Plume of the Pollution leaving the site as a result of the proposed future flooding. I am requesting that soil sample identify the current pollution plume.

I am requesting that testing should include a comprehensive report to identify the true and correct impact of the Leaching of Pollution into the San Pablo Bay Federal Preserve that has already occurred, furthermore; the report should include: How the food chain being exposed to these elements may negatively impact the birds that will feed in and around the site as a result of exposure to the toxins, PCB's and other reproductive inhibitors that will enter their food chain.

The preserve may actually become an attractive nuisance with an overall negative impact on the birds. The factual conclusion may show that flooding this project site may result in good intensions gone bad.

I am formally requesting that BCDC document the Pollution Plume to determine the current scope of pollution that has affected the bay soils adjacent to the Hamilton site with the information to be used as a baseline to obtain the factual results that will occur from the proposed flooding.

Sincerely,

Susan Anthony
